After downloading the keygen, run it and generate a valid serial number. This will be used to activate the software. Once you have the serial number, you need to run Adobe Photoshop and enter the serial number. If the serial is valid, you will be able to use all of Adobe Photoshop's features. Just remember, cracking software is illegal and punishable by law. Use it at your own risk.

If you've used a prior version of Photoshop or use Lightroom for more photo editing, the app works intuitively -- and very well. Overall, I have no desire to use two programs to do the same thing (you can't do dual Adobe apps editing at the same time, right?). Furthermore, I'm not sure I want an app that's so complicated to use on the iPad, even though it can certainly tackle some leg work. I find I prefer using Photoshop on the desktop, and when I mirror the edits to the iPad, it works well enough to get the job done. The editing tools ranging from layer masking to advanced selections are stellar. The retouching modes, such as Content Aware Fill and Healing Brush, are flexible, and I often use them to create interesting effects. But all of this comes at a price. A subscription costs $19.99, and you'll have to spend another $49.99 for premium features such as red eye reduction. That's $79.98 for most of the features Adobe is able to cram into this app. That's in addition to whatever it costs to license Adobe's cloud services, which helps power those advanced features. The app itself also costs $129.99. While that sounds like a lot, it's still much cheaper than most competing apps and bundles, some as low as $79.99. In fact, if you want an iPad app that's as easy to use as Photoshop, you'll have to spend nearly twice as much – $189.98. That app is at the same time simpler, faster, and less powerful than Photoshop. It's also much less flexible, and much more limited when it comes to features. Adobe Photoshop is far from perfect, but it's so close that it's hard to deny its usefulness.
